

ABSTRACT

A bamboo grid for a barbeque grill is introduced, which comprises a plurality of natural bamboo strips, a pair of end retainers and a grid mounting set having a metal frame and a pair of grid mounting plates for mounting the grid set. An arch-shaped bamboo grid set has a plurality of bamboo strips, a pair of end retainers, clip array, and a grid mounting set having a rectangular steel frame, handles and grid mounting plates for mounting the bamboo grid. A bent mounting set comprises a steel frame, a bent mounting plate and a pair of braces at both sides for mounting the disposable bamboo grids. A narrow bamboo strip is sliced from a natural bamboo stalk and the surface is carved with various decorative incisions not only for decorating, but also for extracting bamboo sap and allowing it to permeate into the cooking meat during broiling.
